

## LED SECTION

- **Power On** - Upon connecting the Proteus to a power supply both the orange and blue lights will blink 2 times.
- **Usage Indication** - When vaping the battery will indicate the Proteus' use via the orange LED. As the user vapes the Proteus the led will light up gradually.
- **Vape time** - If the Proteus is in use for more than ten seconds it will default to a protection mode and cease firing. The LED will blink orange ten times before the Proteus enters standby mode.
- **Charging** - While charging the orange LED will be shown. When fully charged the LED will indicate as blue.
- **After vaping** - When the atomizer is no longer being used the LED will dim.
- **Low Battery Warning** - When the Proteus detects a charge of 3.3V or less it will enter Low Power Warning mode. If the Proteus is vaped the coil will not fire and the orange LED will blink 15 times. (Solution: Charge your batteries.)
- **Short Circuit Protection Mode** - If the Proteus detects a short in the device before or while vaping the LEDs (both colors) will blink 2 times. (Solution: Check that the port for charging is working to test the status of the microchip in your Proteus. Also check the status of the atomizer installed.)

## CAUTION AND WARNING

- Children under the age of 18, pregnant women, and other people at risk should not use the Proteus.
- Check the batteries before using to ensure that they are secured properly in order to avoid a short.
- For best results, we suggest that the ejuice you're using in the Proteus is at least 50% VG or more.
- When using a brand new coil allow your juice to soak into the organic cotton for at least 3 minutes before using.
- Once you have filled the tank be sure to check that the rubber stopper is secured.
- Handle the Proteus' glass juice tank carefully in order to avoid injury.
- Only use high capacity discharge batteries rated for 20c or more.
- Do not use batteries which are rated for less.
- Replace the atomizer immediately if you experience a burnt taste while vaping.
- To store the Proteus empty the tank and dry it out. Remove the batteries and fully charge them. Store in a cool and dry place until next use.
- Before using the Proteus please confirm that the batteries are installed correctly. Positive end up, pointing toward the tank. Negative end down pointing away from the tank.
- If you trigger the low voltage warning replace the batteries or fully charge the current pair. (Keep your batteries in a cool dry place.)
- If you notice any signs of battery failure (acid smell, overheating, discoloration, deformation, or leaking) stop use and discard immediately.
- If you see the short circuit signal check your connection or seek after sales technical support from your local authorized retailer.
- When charging be sure to use the charger safely. When the batteries are charged unplug the charger.
- This Proteus contains a cpu and other fragile parts. Handle with care.
- Keep out of reach of children.

## PACKAGE CONTENTS

- \*1 Proteus E-hookah head with an atomizer preinstalled
- \*2 18650 batteries (2500mAh)
- \*1 USB to Micro USB chord
- \*1 User Manual

2

## HOW TO USE ASPIRE ELECTRONIC HOOKAH

### Battery Installation

- Unscrew the two metal caps on the bottom of the Proteus head.
- Insert your 18650 battery with the positive end up and the negative end pointing down.
- Tighten the two metal caps back into place.

### Atomizer Replacement

- Remove the metal cap from the Proteus' juice tank and unscrew the atomizer that is currently installed.
- Simply screw in a new atomizer.
- Now screw the Proteus' metal top back into place.
- Allow your new atomizer's organic cotton to soak up your juice for at least three minutes before use.

3

## HOW TO USE ASPIRE ELECTRONIC HOOKAH

### Proteus Installation

- When installing a new coil be sure to allow your juice to soak through the organic cotton for at least three minutes to avoid burning the wicking.
- Remove the rubber plug atop the Proteus' juice tank and pour in your favorite juice.
  - Reseat the plug to seal the Proteus' juice tank.
- Then screw the tank back onto the Proteus' head.
- Next mount the Proteus head in place of your standard hookah head. Be sure that the seal is airtight.
