User Manual

Starter Kit Info

Fire Button: The only starting point/control! Please read the manual carefully before use as it will help you to understand the basic operations of the device and avoid any misuse. Press the fire button 5 times quickly to lock/unlock the device to prevent accidental firing.

Temperature Control (TC): It is a new setting incorporated which can control temperature. Please read the manual carefully before use as it will help you to understand the basic operations of the device and avoid any misuse. Please note that the default setting is Temperature Control (TC) and you must set it to Wattage/Power Mode (W) if you want to fire with coils made with Ni200.

How do I check?
